Chapter 1

Fortran 90, 95 and 2003 Books

Version 1.3, June 2009; Removed invalid web address in Morgan and Schonfelder entry; Corrected spelling in Chinese entry;

Version 1.2, September 2008; Added Section 1.1, Adams et al; Added Section 1.10, Ciaburro;

Version 1.1, September 2007; Added Section 1.1, Chapman; Added Section 1.2, Lemmon

1.1 Fortran 2003 - English

- Adams, J.C., Brainerd, W.S., Hendrickson, R.A., Maine, R.E., Martin, J.T., Smith, B.T., The Fortran 2003 Handbook, The Complete Syntax, Features and Procedures, 2008, Springer Verlag, ISBN: 978-1-84628-378-9
- Chapman S.J., Fortran 95/2003 For Scientists and Engineers, 2007, McGraw-Hill. ISBN 978-0073191577, ISBN 0073191574
- Metcalf M., Reid J. and Cohen M., Fortran 95/2003 Explained, 2004, Oxford University Press. ISBN 0-19-852693-8, ISBN 0-19-852692-X

1.2 Fortran 95 - English

- Adams J.C., Brainerd W.S., Martin J.T., Smith B.T., and Wagener J.L, Fortran 95 Handbook, 1997, MIT. ISBN 0-262-51096-0.
- Adams J.C., Brainerd W.S., Martin J.T. and Smith B.T., Fortran Top 95, Ninety Five Key Features of Fortran 95, \$10 The book is only available in PDF form from the Fortran Store, <http://www.fortran.com/>

- Akin E., Object Oriented Programming via Fortran 90/95, 2003, Cambridge University Press. ISBN 0-521-52408-3.

Chapter 2

Fortran 90, 95 and 2003 Compilers

Version 1.7, June 2009. Added a new section on compilers that are no longer available. This has involved moving the entries on Apogee, Compaq and NA Software into this section. For historical completeness we've also added an entry for EPC to this section.

Version 1.6, September 2008. Updated the NAG entry with more details of the Fortran Builder IDE.

Version 1.5, September 2007. Updated Absoft Entry, Compaq, Fortran Company, Fujitsu, Gnu Fortran 95, G95, IBM, Intel, Lahey/Fujitsu, NAG, NA Software, NEC, Pathscale, PGI, Salford/Silverfrost, SGI, Sun.

2.1 Introduction

The following is a list of companies and organisations that provide Fortran compilers that conform to the Fortran 90, 95 or 2003 standard. Fortran Forum has a more or less standing table on compilers that support features from the 2003 and 2008 standards. The gfortran, g95 and Sun compilers are free for Linux, and gfortran and g95 are free for Windows.

2.2 Absoft

<http://www.absoft.com/>

Absoft Fortran compilers, debuggers, and development tools for Windows, Macintosh, and Linux include source-compatible Fortran 95 compiler suites for Intel, AMD, Linux (32-bit and 64-bit), PPC/Linux, Macintosh OSX and Windows. These complete Fortran compiler suites, called Pro Fortran, include both F77 and F95 compilers plus complete a development environment with IDE, Fortran Editor, Absofts C/C++ compiler, and the Fx/Fx2 Fortran debuggers. All Absoft Pro Fortran compiler suites provide full support for the native environment, include graphics, precompiled math libraries, VAX/Unix subroutine compatibility libraries, HDF libraries and free technical support. Software Cluster Kits, which include pre-configured MPICH, PVM,

ScaLAPACK and PBS, are available for Linux systems. Auto-parallelizing (SMP) an auto-vectorizing preprocessor, an OpenMP pre-processor, and IMSL Numerical libraries are optional. Absoft also distributes IBMs high-performance XL Fortran compiler, v8.1, and IBMs XL C/C++ compiler, v6.0, for the G5/PowerMac running OSX: The Fortran 95 Compiler for 32-bit Linux also comes with several features from Fortran 2003.

News: Absoft have an IDE under development for Linux, Mac OS and Windows. They are currently looking for neta testers.

2.3 Cray

<http://www.cray.com/>

Cray has a fully optimizing Fortran 95 compiler available for the Cray PVP (J90, C90, T90, SV1), T3E, and X1 systems. The PVP compiler supports automatic parallelization and OpenMP. The T3E compiler supports Co-Array Fortran. The X1 compiler supports automatic streaming, OpenMP, Co-Array Fortran, and several Fortran 2003 features.

2.4 Fortran Company

<http://www.fortran.com/>

The Fortran Company offers F, the subset language, for Unix and Windows, some in highly optimizing versions. All of the full professional versions of the F compiler are available free by downloading them from the F anonymous ftp directory.

The Fortran Tools include a Fortran 95 compiler with a graphical user interface that runs on Linux or Windows on a CD. The CD also includes several Fortran books in PDF format and many tools, such as Matran, a matrix computation library that uses the highly tuned Atlas libraries, a plotting package, and a library of routines to create GUIs for your Fortran application programs.

2.5 Fujitsu

<http://www.fujitsu.com/global/>

Fortran 95 (Solaris) A powerful, updated development system used for FORTRAN productive applications Current version: Sun Studio 9

The ISO Fortran 95 Standard is fully supported, additionally there are enhancements for Fortran77 such as pointers/structures, binary/octal/hexadecimal constants, etc. High optimization includes automatic parallelization and OpenMP support. A Fortran runtime system optimized for UltraSPARC is now also included in the package. The development environment consists of the following components:

Workbench: An integral development environment for the C/C++ and Fortran compilers, for compiler control, program execution, debugging, performance analysis, coverage etc. with a Motif-based graphical user interface (GUI).

Visual Analyzer: A development and migration tool for C/C++ and Fortran programs. The enclosed Source Analyzer allows the static program structure and the global data relations to be visualized. It contains a class browser, cross references and a calling graph viewer.

Parallel Analyser: Consists of an integrated development environment for the OpenMP programming. It contains a manager, a debugger and a profiler.

Fujitsu also has a Fortran 95 compiler for Linux and a highly optimized, native Fortran 95 compiler, Fortran/VPP and HPF, for its VPP supercomputers.

2.6 Gnu Fortran 95

<http://gcc.gnu.org/wiki/GFortran>

<http://gcc.gnu.org/fortran/>

Gfortran is the name of the GNU Fortran project, developing a free Fortran 95/2003 compiler for GCC, the GNU Compiler Collection. The gfortran development effort uses an open development environment in order to attract a larger team of developers and to ensure that gfortran can work on multiple architectures and diverse environments. The GNU Fortran 95 project, or gfortran, is developing a Fortran 95 compiler front end, as well as runtime libraries, for GCC, the GNU Compiler Collection. Gfortran development is a part of the GNU project, aiming to bring free number crunching to all GNU system variants. The gfortran development effort uses an open development environment in order to attract a larger team of developers and to ensure that gfortran can work on multiple architectures and diverse environments. In particular, the project wishes to reach the users of the Fortran 95 language, be it in the scientific community, in education or in a commercial environment. Today, truly free Fortran 90 or Fortran 95 compilers do not exist. We are trying to make one available to the Fortran community.

2.7 G95

<http://www.g95.org/>

G95 is a stable, production Fortran 95 compiler available for multiple cpu architectures and operating systems. Innovations and optimizations continue to be worked on. Parts of the F2003 standard have been implemented in g95.

2.8 Hewlett Packard

The web address that describes all of the compilers and supported hardware and operating systems is

http://h21007.www2.hp.com/dspp/tech/tech_TechSoftwareDetailPage_IDX/1,1703,6235,00.html

HP's Fortran products are available for multiple platforms: Windows, Tru64 UNIX AlphaServer systems, Linux AlphaServer systems, and HP OpenVMS (Alpha / VAX).

Visual Fortran for Windows

Fortran for Linux Alpha

Fortran for Tru64 UNIX Alpha

Fortran for HP OpenVMS Alpha

Fortran for HP OpenVMS Integrity

Fortran for HP OpenVMS VAX

Fortran for HP-UX

The Windows product, Compaq Visual Fortran, includes the Microsoft Developer Studio IDE which can be shared with Microsoft Visual C++. Parallel execution using OpenMP-directed decomposition or HPF is included on the Tru64 UNIX platform. On Windows NT, SMP parallel execution using directed decomposition is available through Visual. Compaq Fortran for Linux Alpha Systems is available as a free download under a Technology Enthusiast license for non-commercial use. All Compaq Fortran 95 products include the Compaq Extended Math Library of optimized scientific subroutines and the allocatable array extensions.

2.9 IBM

<http://www-306.ibm.com/software/awdtools/fortran/>

<http://www-306.ibm.com/software/awdtools/fortran/xlfortran/features/f2003.html>

XL Fortran Enterprise Edition for AIX XL Fortran Enterprise Edition for AIX provides industry-leading code optimization and tuning features, a full implementation of the OpenMP API Version 2.5, Symmetric Multiprocessing (SMP) APIs, direct manipulation of the floating-point status and control register, 64-bit enablement, asynchronous I/O, debug memory routines, and many other features.

XL Fortran Advanced Edition for Blue Gene XL Fortran Advanced Edition for Blue Gene is the latest addition to our XL Fortran compiler family. It expands our proven XL Fortran compiler technology to exploit the capabilities of the PowerPC 440 and 440d processors used in IBM Blue Gene/L supercomputers.

XL Fortran Advanced Edition for Linux XL Fortran Advanced Edition for Linux supports your choice of RHEL4, SLES9, and Y-HPC Linux distributions. Advanced optimization technology and VMX support help you create high-performance 32-bit and 64-bit applications that run efficiently on a variety of processor architectures, including IBM's newest POWER5+ and PowerPC 970 processors, and Apple Power Mac G5 and Xserve G5 systems.

VS FORTRAN VS FORTRAN contains features geared to help Fortran programmers develop applications more easily and efficiently, while using the full power of IBM's large systems.

The second web link has details of Fortran 2003 support.

2.10 Intel

<http://software.intel.com/en-us/forums/>

Intel offer Fortran compilers for three application development platforms: Windows, Linux and Mac OS X.

The following text is taken from the Intel site.

Windows

Intel Visual Fortran Compiler Standard and Professional Editions Unleash the vast potential of the next generation of multi-core Intel processors. Multi-threaded processing is within easy reach of software developers today, enabling you to benefit from strides forward in hardware technology.

New Professional Edition combines a high performance compiler with Intel Math Kernel Library (Intel MKL) to create a strong foundation for building robust, high performance parallel code at significant price savings.

Intel Visual Fortran Compiler Professional Edition offers the best support for creating multi-threaded applications. Only the Professional Edition offers the breadth of advanced optimization, multi-threading, and processor support that includes automatic processor dispatch, vectorization, auto-parallelization, OpenMP*, data prefetching, loop unrolling, substantial Fortran 2003 support, along with an optimized math processing library and Microsoft Visual Studio*.

Developers can now choose between three options, depending on their math processing needs.

Professional Edition The Professional Edition combines our high performance compiler with our high performance Intel Math Kernel Library (Intel MKL).

Professional Edition with IMSL* The Professional Edition with IMSL* includes the Intel Math Kernel Library and the highly respected and extensive IMSL Fortran Library for Windows

Standard Edition The Standard Edition compiler has the same performance and features as the Professional Edition compiler, but does not include Intel MKL or IMSL.

All editions now include Microsoft Visual Studio 2005 Premier Partner Edition, providing a complete Fortran development environment.

Linux

Deliver rapid development and winning performance for the full range of Intel processor-based platforms. This compiler product automatically optimizes and parallelizes software to take best advantage of multi-core Intel processors.

New Professional Edition combines a high performance compiler with Intel Math Kernel Library (Intel MKL) to create a strong foundation for building robust, high performance parallel code at significant price savings.

Cluster OpenMP* for Intel Fortran Compiler for Linux* Provides a simple means of extending OpenMP parallelism to 64-bit Intel architecture-based clusters.

Mac OS X

Deliver outstanding performance by optimizing your applications for Intel multi-core processors. The Professional Edition includes the Intel Math Kernel Library.

New Professional Edition combines a high performance compiler with Intel Math Kernel Library (Intel MKL) to create a strong foundation for building robust, high performance parallel code at significant price savings.

2.11 Lahey/Fujitsu

<http://www.lahey.com/>

Lahey/Fujitsu Fortran 95 is produced by the Lahey/Fujitsu alliance. LF95 is available in three Windows configurations: Express, Standard, and PRO, and two Linux configurations: Express and PRO. All configurations feature: VAX, IBM, and POSIX language extensions, allocatable array enhancements, etc. The Windows and Linux Express version is command line only and features the compiler, linker and debugger. PRO for Windows adds a Fortran-smart Windows editor, a debugger, an AUTOMAKE make utility, and an enhanced Winteracter Starter kit (WiSK) for creating true Windows programs with Fortran, and a Coverage Analysis Tool that detects unexecuted code and performs range of operation checking. The PRO is compatible with Visual C++, Visual Basic, and Delphi and also includes Fujitsus SSL2 Math Library and Visual Analyzer (see below). The PRO Linux version offers auto-parallelization, OpenMP compatibility, thread-safe BLAS and LAPACK, WiSK, AUTOMAKE, and Fujitsus SSL2. All products come with free technical support and are available at . Also available is a subset compiler, elf90.

It would appear that the Windows version is no longer under active development. The last update was dated December 2004.

2.12 NAG

<http://www.nag.co.uk/nagware.asp>

The NAGWare f95 Compiler, derived from the world's first Fortran 90 Compiler from NAG is robust, highly tested, and valued by developers all over the globe for its checking capabilities and detailed error reporting. Available on a wide range of Unix and Windows platforms it accepts fixed or free format Fortran 95 input and many common Fortran 77 extensions are allowed. A large number of Fortran 2003 language features are now available. HPF code is also compiled and checked though only single processor output is generated.

The following versions are available.

- AMD-64.Linux64
- Apple_Power_Mac
- Free_BSD
- HP_Alpha_Linux
- HP_Alpha_Tru64
- HP_PA-RISC.1.1
- IBM_Power_AIX

Intel-32.Windows
Intel-64.Linux64
SGI_MIPS_IRIX
Sun_SPARC_Solaris
x86-32.Linux

An integrated Fortran IDE is also available for Windows.
<http://www.nag.co.uk/nagware/np/fortranbuilder.asp>

2.13 NEC

<http://www.nec.com/>

NEC has a native, optimizing Fortran 95 compiler, FORTRAN90/SX, with an automatic vectorization and parallelization capability, for its supercomputer SX series. HPF/SX V2 provides functions conforming to the specification of HPF1.1 and HPF2.0 and can be used with vector processing functions in SX Fortran and with parallel processing functions using microtasking.

2.14 PathScale

http://www.pathscale.com/products/pathscale_compiler_suite

PathScale's goal is to make it easier to develop and deploy 64-bit applications into clustered environments. PathScale has developed the industry's highest-performance C, C++, and Fortran 9X compilers for 64-bit Linux-based computer systems. The PathScale Compiler Suite shares its heritage with the well-known and mature SGI compiler suite. The PathScale Compiler Suite has been optimized for both the AMD64 and EM64T architectures and has the world's most sophisticated optimization infrastructure.

Unlike other compilers, the PathScale Compiler Suite provides superior performance across both floating-point and integer-intensive applications. Application developers targeting 64-bit Linux servers will see immediate performance benefits from compiling with the PathScale compilers.

The PathScale Compiler Suite includes:

C, C++, and Fortran 77/90/95 compilers Industry leading optimizations Complete support for OpenMP 2.0 (including WORKSHARE) Complete support for 64-bit and 32-bit x86 compilation Code generation for AMD64 ABI, AMD Opteron, and Intel EM64T PathScale optimized AMD Core Math Library (available for download) Advanced serial debugger PathDB Compatible with GNU/gcc tool chain and popular Third Party debuggers Supported on SUSE, RedHat, and Fedora Linux The currently shipping version of the PathScale Compiler Suite is

2.15 PGI

[Http://www.pgroup.com/](http://www.pgroup.com/)

High-performance Optimizing Parallel Compilers

For multi-core 64-bit x64 and 32-bit x86 processor-based Linux, Mac OS X and Windows workstations, servers and clusters.

PGI Workstation includes a single seat license for PGI's suite of compilers and tools. Also available with a multi-user network floating license (PGI Server). The PGI CDK Cluster Development Kit includes all the software for building and programming a turn-key Linux cluster. PGI Visual Fortran fully integrates PGI parallel Fortran into Microsoft Windows using Microsoft Visual Studio 2005.

2.16 Salford Software

<http://www.silverfrost.com/11/ftn95/overview.asp>

Salford Software markets FTN95, a Fortran 95 compiler for Win32, running on Windows 95/NT/2000/XP PCs. It has announced its Fortran 95 compiler for Microsoft .NET (FTN95 for .NET). This compiler will produce fast executables from source files that may be any combination of Fortran 77, Fortran 90 and Fortran 95. FTN95 for .NET, including integrated Help and Debugger, is supplied bundled with FTN95 for Win32 and, optionally, with Microsoft Visual Studio for .NET. A low-cost, fully-featured personal edition is also available.

2.17 SGI

<http://www.sgi.com/products/software/irix/tools/fortran.html>

MIPSpro Fortran Compilers This 64-bit ANSI Fortran 77 compiler is ideal for systems running IRIX 6.x. It is compatible with VAX/VMS Fortran and supports Cray extensions. The 7.4 version of the MIPSpro Fortran 77 and Fortran 90 compilers now support the OpenMP 2.0 standard. Among the new features introduced in the OpenMP 2.0 specification are:

WORKSHARE directive COPYPRIVATE clause for the broadcast of sequential reads Portable timing routines MIPSpro Fortran 90 Compiler A 64 bit ANSI Fortran 90 compiler with additional support for user-defined multiprocessing directives for systems running IRIX 6.x. Compatible with VAX/VMS Fortran and supports Cray extensions. With the release of version 7.4, Fortran 90 specific support under the OpenMP 2.0 standard are:

Parallelization of F90 array syntax via the WORKSHARE directive Privatization of deferred shape and assumed shape objects The full Fortran 2.0 specification can be obtained from the OpenMP Web site at: <http://www.openmp.org>

For more information, read about the MIPSpro compilers.

2.18 Sun

<http://www.sun.com/>

<http://developers.sun.com/sunstudio/>

Sun Studio software delivers high-performance, optimizing C, C++, and Fortran compilers for the Solaris OS on SPARC, and both Solaris and Linux on x86/x64 platforms, including the latest multi-core systems.

What's in Sun Studio:

All Compilers - Specify 32-bit or 64-bit Address Model, Auto-parallelization of single-threaded code, Flags, Static data-race and deadlock-detection for x86, Math and Visual Instruction Set Support in SPARC64 VI, Option for Floating-Point, Fused or Multiply-Add Instructions, Option for Thread Analyzer support, Linux Support, OpenMP and OpenMPI support, Support for the directives, clauses and attributes.

Fortran Compiler - Interval arithmetic support on Solaris Intel platform, Faster compilation time for source files, UNSIGNED arguments, Backward compatibility with f77

C Compiler - More options, Auto-parallelization of single-threaded code, GNU C compatibility

C++ Compiler - More options, ABI compatibility, Compiler flags to optimize for multicore architectures, Static linking the standard C++ runtime library.

2.19 No longer available

2.19.1 Apogee

<http://www.apogee.com/>

Features of the FORTRAN 77/90 Compiler

No longer available. Originally available for the Solaris/SPARC platforms, the compiler conforms to Sun's Solaris ABI and produces assembler code files acceptable to Sun's Solaris assembler. When used in the FORTRAN 77 compilation mode, the compiler is compliant with the MIL-STD 1753 FORTRAN 77 and accepts most FORTRAN 77 extensions of Sun, IBM, and other F77 compilers. The supported F77 extensions include structures, length qualification on types, additional data and constant types, initializations in type statements, additional statements (END DO, DO WHILE, POINTER, VOLATILE, etc.), computations with aggregates, namelist-directed I/Os, and debugging statements.

When used in the Fortran 90 mode, the compiler is compliant with the ANSI/ISO Fortran 90 standard.

2.19.2 Compaq

This compiler is no longer under development. This ceased when Intel bought out the technology from HP. Still widely used with legacy software. Copies for sale can be found on Ebay and similar sites.

2.19.3 EPC

Edinburgh Portable Compilers was an early vendor to produce a Fortran 90 compilation system. A report by Adam Marshall from Liverpool University has a comparison of several early Fortran 90 compilers. It can be found at the address below.

<http://www.liv.ac.uk/HPC/FortranCompilerStudyHTML/FortranCompilerStudyHTML.html>

2.19.4 NA Software

<http://www.nasoftware.co.uk/home.html>

No longer available.

Chapter 3

Fortran aware editors or development environments

Version 1.31, April 2006. Added Windows Zeus entry.

3.1 Windows

Chapter 4

Commercial Fortran Courses

Version 1.1, September 2008,

Version 1.0, January 2006.

4.1 Ian Chivers and Jane Sleightholme

Ian Chivers and Jane Sleightholme are available to do tailored on site courses. Courses include

- 5 day Introduction to Programming in Fortran 90 and 95
- 3 day Fortran 77 to Fortran 90 and 95 conversion course.
- 3 day crash Fortran 90 and 95 programming course.

See

<http://www.fortranplus.co.uk>

4.2 Cranfield University

Shrivenham Campus

offers a 5-day course Scientific Programming with Fortran 95, and by arrangement, a 3-day course Fortran 90 for Fortran 77 Programmers. Courses can also be arranged on demand and tailored to requirements.

See

<http://www.rmcs.cranfield.ac.uk/amorg>

and follow link to AMORG Short Courses.

4.3 The Fortran Company

<http://www.fortran.com/>

Follow training links.

4.4 Lahey

<http://www.lahey.com/>

The Fortran 95 Workshop is a six-session, hands-on, Fortran 95 workshop led by Thomas M. Lahey, CEO, Lahey Computer Systems, Inc.

4.5 Michael Metcalf

formerly of CERN, Switzerland, and an ex-member of J3 and WG5, offers a Fortran 95 course that lasts for six 75-minute sessions. There is an F version too. He is happy to negotiate holding either version anywhere in the world. These courses are suitable for graduates, or equivalent level, and are a useful way to kick-start a Fortran 90/95 or an F activity at a given site. Contact at michael.metcalf@t-online.de, or Manfred-von-Richthofen Strae 15, 12101 Berlin, Germany, +0049.30.78952573.

4.6 PTR Associates

Currently offer two Fortran courses.

<http://www.ptr.co.uk/fortran-conversion-course.html>

<http://www.ptr.co.uk/fortran-programming.html>.

4.7 Purple Sage Computing Solutions, Inc

is offering three Workshops to Fortran programmers: The Fortran Modernization, Optimization and Parallelization Workshop; The Parallelization for Fortran Programmers Workshop; and The fthreads Workshop. Contact dnagle@erols.com or

<http://users.erols.com/dnagle>.

Also on offer is a one day workshop on the new features of Fortran 2000. See

<http://users.erols.com/dnagle/wsf2000.html>

.

for more details.

4.8 John Reid

formerly of J3 and a member of WG5, offers a Fortran 90 course. He is happy to negotiate holding it anywhere in the world. It is suitable for graduates, or equivalent level, and is a useful way to kick-start a Fortran 90 activity at a given site.

Contact john.reid@stfc.ac.uk.

4.9 France

Simulog, attn. Mr. E. Plestan,
1 rue James Joule, F-78286 Guyancourt Cedex, France
Tel: +33 1 30 12 27 80 fax: +33 1 30 12 27 27

Chapter 6

Graphics and Windows Programming and Fortran

itemVersion 1.1, June 2009; updated web links.

Version 1.0, January 2006.

6.1 Introduction

This can be broken down into

- Simple graphics programming using a library
- visual interface via raw windows programming
- visual interface via visual development environment

Here are some of the library and development offerings.

6.2 dislin

DISLIN is a high-level plotting library for displaying data as curves, polar plots, bar graphs, pie charts, 3D-color plots, surfaces, contours and maps.

<http://www.mps.mpg.de/dislin/>

documentation

<http://www.mps.mpg.de/dislin/contents.html>

worked examples

<http://www.mps.mpg.de/dislin/examples.html>

6.3 gino

GINO is a suite of high-end development tools for creating complex 2D and 3D graphics and GUI applications. The products are ideally suited for aerospace, defence, utilities and other leading engineering organizations. The GINO products are available for Fortran, C/C++, VB, Delphi and .NET programming environments.

<http://www.gino-graphics.com/home/home.htm>

<http://www.polyhedron.co.uk/>

documentation

The software is supplied with on-line manuals in a variety of formats depending on the environment it is running (Windows Help, HTMLHelp, HTMLHelp2, PDF) and Printed Manuals are available at an additional cost.

<http://www.gino-graphics.com/downloads/manuals.htm>

worked examples

6.4 ginomenu

GINOMENU is a subroutine toolkit for developing GUI applications under Windows. It provides extensive window and widget building modules allowing professional user-interfaces to be created under Windows 9x/NT/2000/XP without the need to get involved in MFC, API or mixed-language programming.

<http://www.gino-graphics.com/products/menu.htm>

6.5 interactor

<http://www.polyhedron.co.uk/>

INTERACTOR is our original multi-platform user-interface and graphics subroutine library for Fortran 77/9x developers.

documentation -

worked examples

6.6 opengl

OpenGL is the premier environment for developing portable, interactive 2D and 3D graphics applications. Since its introduction in 1992, OpenGL has become the industry's most widely used and supported 2D and 3D graphics application programming interface (API), bringing thousands of applications to a wide variety of computer platforms. OpenGL fosters innovation and speeds application development by incorporating a broad set of rendering, texture mapping, special effects, and other powerful visualization functions. Developers can leverage the power of OpenGL across all popular desktop and workstation platforms, ensuring wide application deployment.

<http://www.opengl.org/>

documentation

worked examples

f90gl is a public domain implementation of the official Fortran 90 bindings for OpenGL.

<http://math.nist.gov/f90gl/>

Precompiled f90gl libraries are available for some compilers. Lahey LF90, LF95 and ELF90: <http://www.lahey.com> (search for OpenGL)

Compaq CVF (formerly DVF): <http://www.compaq.com/fortran/> (click on "Downloads" and search for f90GL)

Intel Visual Fortran: <https://premier.intel.com/> (Registered users log in, select File Downloads and search for f90gl.)

documentation

<http://math.nist.gov/f90gl/documentation.html>

worked examples

Some precompiled libraries may not include the example programs or the source code for the examples. The following files contain the examples subdirectory from the f90gl distribution.

Unix: fglexamp.tar.gz zipped tar file (73K) Win32: fglexamp.zip zip file (134K)

6.7 psplot

A free Fortran-callable PostScript Plotting Library

<http://www.nova.edu/ocean/psplot.html>

documentation

<http://www.nova.edu/ocean/grman.pdf>

worked examples

6.8 realwin

RealWin lets a Fortran programmer create full-featured applications for Microsoft 32-bit Windows platforms.

<http://www.indowsway.com/home.htm>

<http://www.indowsway.com/>

documentation
worked examples

6.9 toolmaster

http://www.avs.com/software/soft_t/toolm.html

Toolmaster agX is a cross-platform graphics library. For FORTRAN programmers, AVS offers FGL/AGL, which provides equivalent functionality to the agX C library.

documentation
worked examples

http://www.avs.com/software/soft_t/toolm.html

6.10 winteractor

<http://www.polyhedron.co.uk/>

Winteracter is a modern GUI toolset for the Fortran 90/95 programming language. It consists of various visual development tools and a substantial subroutine library. Versions are available for most Fortran 9x compilers.

documentation
worked examples

6.11 Microsoft Windows graphics programming

This can be done in a variety of ways.

The following is a good book with examples of doing this using Compaq Visual Fortran.

Norman Lawrence, Compaq Visual Fortran: A Guide to Creating Windows Applications.

He also has coverage of opengl.

It is also possible to develop the visual interface using Visual Basic and call fortran dlls.

If you have Compaq Visual Fortran then the on-line Programmers Guide has coverage of mixed language programming with examples.

The following compilers offer intergrated support for Windows programming under .NET.

Lahey/Fujitsu

<http://www.lahey.com/>

PRO for Windows adds a Fortran-smart Windows editor, a debugger, an AUTOMAKE make utility, and an enhanced Winteracter Starter kit (WiSK) for creating true Windows programs with Fortran, and a Coverage Analysis Tool that detects unexecuted code and performs range of operation checking. The PRO is compatible with Visual C++, Visual Basic, and Delphi and also includes Fujitsus SSL2 Math Library and Visual Analyzer (see below).

Salford Software

<http://www.silverfrost.com/11/ftn95/overview.asp>

FTN95 for .NET, including integrated Help and Debugger, is supplied bundled with FTN95 for Win32 and, optionally, with Microsoft Visual Studio for .NET. A low-cost, fully-featured personal edition is also available.

Chapter 7

Parallel Programming with Fortran

Version 1.2, June 2009; Corrected and updated several web addresses.

Version 1.1, January 2006.

7.1 Introduction

The Fortran language has been standardised a number of times

- Fortran 66
- Fortran 77
- Fortran 90
- Fortran 95
- Fortran 2003

and Fortran 2008 is work in progress.

The Fortran 90 standard added whole array features and a WHERE construct that were aimed at parallel programming.

The Fortran 95 standard added the FORALL construct, and PURE and ELEMENTAL procedures to help with parallel programming.

Fortran 2008 adds coarrays.

Independently of the Fortran Standards Committees there have been a number of other developments aimed at parallel programming including

- HPF
- MPI
- OPENMP
- Posix Threads

and each of these is covered in more depth below.

Two tutorials on parallel programming are given below.

http://www.mhpcc.edu/training/workshop/parallel_intro/MAIN.html

<http://users.actcom.co.il/~choo/lupg/tutorials/parallel-programming-theory/parallel-programming-theory.html>

7.2 Automatic

By this is meant automatic parallelisation of the code without source code modification.

7.3 Coarray Fortran

Coarray Fortran is a small extension to Fortran 95. It is a simple, explicit notation for data decomposition, such as that often used in message-passing models, expressed in a natural Fortran-like syntax. The syntax is architecture-independent and may be implemented not only on distributed memory machines but also on shared memory machines and even on clustered machines.

This is a proposal for Fortran 2008.

<ftp://ftp.nag.co.uk/sc22wg5/N1601-N1650/N1642.pdf>

<http://j3-fortran.org/doc/meeting/173/05-208.txt>

Older references can be found at

<http://www.co-array.org/>

and

<http://lacs.rice.edu/software/caf/>

7.4 HPF

The High Performance Fortran Forum (HPFF), a coalition of industry, academic and laboratory representatives, works to define a set of extensions to Fortran 90 known collectively as High Performance Fortran (HPF). HPF extensions provide access to high-performance architecture features while maintaining portability across platforms.

Harvey Richardson has provided a historical perspective on HPF. Visit

<http://www.zeenty.com/HPF/HPF-intro.pdf>

Requires source code modification.

7.5 MPI

MPI is a library specification for message-passing, proposed as a standard by a broadly based committee of vendors, implementors, and users.

<http://www-unix.mcs.anl.gov/mpi/>

<http://www-unix.mcs.anl.gov/mpi/mpich/>

Requires the installation of the MPI library (some compiler companies offer a bundle of compiler and MPI library) and source code modification.

7.6 OPENMP

The OpenMP Application Program Interface (API) supports multi-platform shared-memory parallel programming in C/C++ and Fortran on all architectures, including Unix platforms and Windows NT platforms. Jointly defined by a group of major computer hardware and software vendors, OpenMP is a portable, scalable model that gives shared-memory parallel programmers a simple and flexible interface for developing parallel applications for platforms ranging from the desktop to the super-computer.

<http://www.openmp.org/>

Resources (including compilers)

<http://www.openmp.org/wp/resources/>

<http://www.openmp.org/wp/resources/openmp-compilers>

<http://www.openmp.org/wp/resources/openmp-specifications/>

Requires source code modification.

7.7 Posix Threads

Posix Threads is a library specification for multithreading, proposed as a standard by a broadly based committee of vendors, implementors, and users.

<http://www.llnl.gov/computing/tutorials/pthreads/>

Requires the installation of a threading library. Many operating systems come with a threading library pre-installed.

Also requires source code modification.

<http://www.llnl.gov/computing/tutorials/pthreads/>

7.8 Notes on the table below

Here is a quote from an email from Bill Long of Cray.

These interchanges took place on comp-fortran-90 at

<http://www.jiscmail.ac.uk/lists/comp-fortran-90.html>

The archives go back to 1997 and can be searched.

>>Malcolm Cohen, Nihon NAG, Tokyo, Japan.
>>(malcolm@nag-j.co.jp)
>>
END QUOTE

```

In the light of these comments I've added a 'C' category which means that you will need to check your

- hardware
- operating system version
- compiler version
- MPI version or Posix Threads version

to see if the combination works.

The Y entry normally means that the compiler supplier provide a bundled or fully supported offering.

7.9 Table of compilers and supported parallel options

| | Automatic | Co Array | HPF | MPI | OPENMP | Posix Threads |
|----------|-----------|----------|-----|-----|--------|------------------|

7.10 Parallelisation Tools

7.10.1 Crescent Bay Software

Offer a range of parallelisation tools.

http://www.crescentbaysoftware.com/end_user.html

VAST-F/Parallel (for Fortran) and VAST-C/Parallel (for C), from Crescent Bay Software, are automatic parallelizing preprocessors that can significantly improve the performance of your important applications on shared memory parallel platforms.

http://www.crescentbaysoftware.com/vast_parallel.html

VAST/toOpenMP from Crescent Bay Software is a parallelizing optimizer that adds OpenMP directives to Fortran programs. Translated programs have portable parallelism that can execute efficiently on a variety of SMP parallel systems from multi-cpu PCs to Supercomputers.

http://www.crescentbaysoftware.com/vast_toOpenMP.html

7.10.2 Parallel Software Products

Offer a tool to help parallelise Fortran 77, Fortran 90 or Fortran 95 code.

Their web address is

<http://www.parallelsmp.com/index.htm>

The tool can generate either MPI calls or Openmp calls.

Chapter 8

Fortran Analysis, Conversion and Maintenance Tools

Version 1.1, June 2009; Added web address for convert; Added web address for for_struct; Updated Nag entry - tools no longer available, being incorporated into the compiler.

Version 1.0, January 2006.

8.1 Convert

Fortran 77 to Fortran 90 converter by Mike Metcalf.

<http://www.nag.co.uk/nagware/Examples/convert.f90>

8.2 Forcheck

A Fortran analyzer and programming aid.

<http://www.forcheck.nl/>

8.3 FOR_STRUCT

<http://www.cobalt-blue.com/fs/fsmain.htm>

Restructures FORTRAN into Clean, Maintainable Code.

8.4 FOR_STUDY

Analyzes and Documents your FORTRAN code.

<http://www.cobalt-blue.com/>

8.5 Fortran90-lint

For Fortran 90 program analysis

<http://www.cleanscape.net/products/downloads/ftpflint.html>

8.6 NAGWare Fortran Tools

The tools provide users with the ability to analyse and transform Fortran 77 and Fortran 95 code. They have been withdrawn as an individual product and are being added to the compiler.

<http://www.nag.co.uk/>

8.7 plusFORT

Fortran 77 to Fortran 90 converter.

<http://www.polyhedron.com/>

8.8 VAST/77to90

Fortran 77 to Fortran 90 translator

http://www.crescentbaysoftware.com/vast_77to90.html

Chapter 9

Fortran Electronic Lists

Version 1.1, January 2006.

9.1 comp-fortran-90

Jiscmail hosted. Restricted to questions about Fortran since the publication of the Fortran 90 standard. Can either browse on-line or subscribe and get postings via email. Postings are archived and go back to 1997.

<http://www.jiscmail.ac.uk/lists/comp-fortran-90.html>

9.2 comp.lang.fortran

Usenet news hosted Fortran list. Covers all aspects of Fortran.

<http://groups.google.co.uk/group/comp.lang.fortran?lnk=lr>

<http://groups.google.ca/group/comp.lang.fortran>

9.3 Compiler specific

Some of the compiler suppliers provide electronic list support. Some provide an email address for technical support.

9.3.1 Absoft

<http://forums.absoft.com/>

support@absoft.com

9.3.2 Apogee

info@apogee.com

9.3.3 Compaq

9.3.4 Cray

9.3.5 Fortran Company

You can subscribe to an e-mail list by sending e-mail to majordomo@fortran.com with the following in the body of the message:

subscribe f-interest-group@fortran.com

9.3.6 Fujitsu

9.3.7 Gnu Fortran 95

You can reach us at the fortran@gcc.gnu.org mailing list; for details please refer to our mailing lists page.

<http://gcc.gnu.org/lists.html>

Chapter 10

Fortran Standard Bodies

Version 1.0, January 2006.

10.1 Introduction

There are two main Fortran standards bodies and these are WG5 and J3. Each is covered in turn below.

10.2 WG5

Their home page is:-

<http://www.nag.co.uk/sc22wg5/>

Their document ftp site is at:-

<ftp://ftp.nag.co.uk/sc22wg5/>

The working draft document is at:-

<ftp://ftp.nag.co.uk/sc22wg5/N1601-N1650/N1601.pdf.gz>

The timetable for next version is at:-

<ftp://ftp.nag.co.uk/sc22wg5/N1551-N1600/N1590.txt>

The new future classification is at:-

<ftp://ftp.nag.co.uk/sc22wg5/N1551-N1600/N1594.txt>

10.3 J3

Their home page is:-

<http://www.j3-fortran.org/>

Their version of the working draft is at:-

<http://www.j3-fortran.org/doc/year/04/04-007.pdf>

Chapter 11

Other Web Links

Version 1.2, June 2009; Updated several web links.

Version 1.1, September 2008

Version 1.0, January 2006

11.1 Fortran History

11.1.1 A brief history of FORTRAN-Fortran
